

COLOR

Rev.01/2019

DESCRIPTION

Composite preparation of organic pigment, non-ionic and polyglycol surfactants, finely dispersed in an aqueous medium.

APPLICATIONS

This preparation is used in the colouring of paints and of a large number of products in the aqueous phase such as soaps, fillers, emulsified waxes, printing inks etc.

It is simply mixed with the product that must be coloured. Sometimes it may be advisable to pre-dilute the product with water.

CONSERVATION

The COLOR preparations have good stability over time and consequently can be stored a long time without danger of alteration.

However, the product should be kept keep products in temperate environments stirred before use.

All product information contained in this publication is based on test results obtained in our in the laboratory and from usage in industrial conditions. However the performance of our products and their ability to respond to the specific needs of customers may vary depending on the particular conditions of use and the surfaces being treated. Therefore we recommend users to check before each use, that each product matches their needs perfectly.

The above technical knowledge regarding the application and the proper use of the products does not mean ALCAS ITALIA s.r.l. assumption of responsibility for the use and application of the products. Because of the unpredictable variability of operating conditions, the APPLICATOR must verify the use of the product under their own conditions with direct evidence. We reserve the right to change the contents of this document without prior notice. As soon as a new version of this data sheet is available, it will no longer be valid.
